PROFESSIONAL EXPERIENCE

Software Engineer II, Nordstrom

Nov 2025 – Present

- Designed and implemented a bulk promotion system delivering to 1M+ customers across 4 vendors, coordinating across 5 business and technical teams with no major incidents
- Built a gift card notification system delivered via email and physical mail, integrating multiple vendors with idempotency guarantees at scale
- Built 16+ net-new Java applications for payment and promotional gift card handling, including RESTful APIs optimized to handle 1,000+ transactions per second (TPS), authoring much of the core business logic
- Developed Claude MCP skills for a shared internal repository, enabling AI-assisted testing, metrics analysis, and engineering standards enforcement while critically validating outputs for accuracy
- Built an automated incident-response agent to perform root cause analysis and resolution of customer-impacting incidents, reducing total customer incident escalations from 5,000 to 700

Software Engineer I, Nordstrom — Extend Yourself Award recipient

Nov 2023 – Nov 2025

- Developed a transaction processing pipeline using Kafka and AWS SQS to award loyalty points, handling 300K+ transactions per day with zero data loss
- Led the migration of 30+ Java Kafka consumers from an on-premises Proton-based implementation to Confluent Cloud
- Played a key role in a loyalty vendor migration completed in under 6 months without disruption to production traffic, contributing across 20+ Java services and applications
- Implemented caching strategies using Redis and a write-through cache backed by DynamoDB, cutting P99 latency in half and improving stability for near real-time data
- Completed a data audit pipeline validating 36M+ records for accuracy and integrity

Undergraduate Researcher, University of Washington

May 2022 – Nov 2023

- Used Google's AlphaFold 2 database to improve protein mutation prediction and identification for DeepTracer, an AI-based structure identification tool
- Improved the DeepTracer ID function by expanding documentation via GitHub Wiki and adding support for new file formats
- Participated in agile ceremonies, including weekly standups and backlog grooming

PROJECT WORK

FindAThread — Team Capstone Project | Python, Flask, Azure SQL, Google Vision AI

June 2023

- Conducted user research to define requirements, then designed a three-tier, cloud-based web application enabling users to build a virtual wardrobe and generate outfits from uploaded clothing images
- Integrated Google Cloud Vision AI to process and categorize uploaded clothing images, serializing results as JSON for storage in an Azure SQL (MySQL) database
- Built an object-oriented Python backend connecting the database to a Flask-based front end (HTML, CSS, JavaScript); collaborated with a team of engineers using Git version control and regular stand-ups

EDUCATION

University of Washington — B.S., Computer Science & Software Engineering (Dean's List)

2021 – 2023

North Seattle College (Dean's List)

2019 – 2021

Relevant Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Software Engineering, Hardware & Computer Organization, Cloud Computing, Embedded Systems

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, HTML/CSS

Frameworks & Cloud: Spring Boot, Flask, .NET, AWS, Azure, GCP, MySQL, Kafka, Confluent Cloud, Kubernetes, Redis

Testing & CI/CD: JUnit, Pytest, GitHub Actions, GitLab CI/CD

Tools & Observability: Git/GitHub/GitLab, Linux, Docker, JDK, Splunk, New Relic, Agile/Kanban

AI Tooling: Claude Code, Claude MCP, AIPDLC
